No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB seq

The encoded protein comprises a substitution of arginine for the wild-type proline at residue 38. The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with inappropriate BEER expression. For example, they may be used to treat disorders associated with decreased TGF-beta BP expression. The cDNA or vectors may be administered to treat diseases by rectifying mutations or deletions in a patient segment that affect the activity of BEER by expressing inactive proteins or to supplement the patients own production of BEER polypeptides. The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for diagnostic assays and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders such as a probe of the protein such as the content of the treatment of disorders such as the content of the treatment of disorders such as a probe of the protein such as the

APPLICANT: Watson, James D.
APPLICANT: Strachan, Lorna
APPLICANT: Strachan, Lorna
APPLICANT: Strachan, Matthew
APPLICANT: Onrust, Rene
APPLICANT: Murison, James Greg
APPLICANT: Murison, James Greg
TITLE OF INVENTION: Compositions Isolated From Skin Cel
TITLE OF INVENTION: and Methods For Their Use
FILE REFERENCE: 11000.1011c1
CURRENT APPLICATION NUMBER: US/09/188,930A
CURRENT FILING DATE: 1998-11-09
NUMBER OF SEO ID NOS: 348
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 286
LENGTH: 206
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ; TYPE: PRT

        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score Mat

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Best Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This shows a vervet transforming growth factor-beta (TGF-beta) binding protein designated vBEER. The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with inappropriate BEER expression. For example, they may be used to treat disorders associated with decreased TGF-beta BP expression. The cDNA or vectors may be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of BEER by expressing inactive proteins or to supplement the patients own production of BEER polypeptides. The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for diagnostic assays and for functional studies. BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders alsorders such as goteoned a national studies.

The coding sequence was isolated from a human kidnay cDNA library containing exons 1 and 4 of the sequence. HDCR6 is closely related to the DAN and DCR5 proteins, both of which act as antagonists morphogenic proteins such as BMP. It is possible that the hDCR6 gene an protein can be used as immunogens, modulators of cell function, growth and differentiation, to reduce undesirable bone formation, to identify DCR6 binding agents, in diagnosis, and in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated, human DNA/Cerberus related protein 6 which include natural homologue, and polypeptides comprising DCR6 domain and nucleids encoding the proteins which are useful as probes and primers

Intropin beta chain - sperm whale

N; Alternate names: luteinizing hormone beta chain
C; Species: Physeter catodon (sperm whale)
C; Date: 07-May-1993 #sequence_revision 07-May-1993 #text_C
C; Accession: PN0141
R; Pankov, Y.A.; Karasev, V.S.
Biokhimia 49, 1004-1018, 1984
A; Title: Luteinizing hormone of the sperm-whale: amino aci
A; Reference number: PN0141; MUID:84281133
A; Accession: PN0141
A; Molecule type: protein
A; Residues: 1-118 <PAN>
A; Note: article in Russian with English abstract
C; Superfamily: pituitary glycoprotein hormone beta chain
C; Keywords: glycoprotein; hormone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         hypothetical protein DKFZp564D206.1 - human (fragment)
C;Species: Homo sapiens (man)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This shows a murine transforming growth factor-beta (TGF-beta) binding protein designated mBEER. The cDNA and protein may be used for prevention, treatment and diagnossis of diseases associated with inappropriate BEER expression. For example, they may be used to treat disorders associated with decreased TGF-beta BP expression. The cDNA or vectors may be administered to treat diseases by rectifying mutations or deletions in a patient's genome that affect the activity of BEER by expressing inactive proteins or to supplement the patients own production of BEER polypeptides. The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for diagnostic assays and for functional studies. BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of alsorders such as garbaneais anterporprise of fractures and other disorders.

The nucleic acids may be used for recombinant production of BEER, gene therapy, antisense therapy, as probes for diagnostic assays and for functional studies. BEER may be used to raise antibodies and for identification of BEER modulators. BEER antagonists may be used to increase bone mineral content for the treatment of disorders such as osteopenia, osteoporosis, fractures and other disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This shows a rat transforming growth factor-beta (TGF-beta) binding protein designated rBEER. The cDNA and protein may be used for prevention, treatment and diagnosis of diseases associated with inappropriate BEER expression. For example, they may be used to treat disorders associated with decreased TGF-beta BP expression. The cDNA or

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

J. Mol. Endocrinol. 3, 129-137, 1989
A; Title: Molecular cloning and nucleotide sequence analysis of the putative cDNA for the A; Reference number: A61091; MUID:89374710
A; Accession: A61091
A; Status: not compared with conceptual translation
A; Molecule type: mRNA
A; Residues: 1-158 < NOC>
C; Superfamily: pituitary glycoprotein hormone beta chain
C; Keywords: glycoprotein; hormone; pituitary predicted <SIG>
F; 48-73,62-96,65-127,77-149,111-139,129-132/Disulfide bonds: #status predicted
F; 52/Binding site: carbohydrate (Asn) (covalent) #status predicted
